

## **What Are Debt Mutual Funds & Why They Matter**

### **What is a Debt Mutual Fund**

A debt mutual fund is a type of mutual fund that collects money from many investors and invests it in fixed-income instruments. These include government bonds, corporate bonds, treasury bills, commercial papers, and other debt securities. When you invest in a debt fund, you are indirectly lending money to governments, banks, or companies. These borrowers repay interest regularly and return the principal amount at maturity.

Debt funds are generally considered more stable than equity funds because their underlying assets produce steady interest income. Their value does not fluctuate as sharply as stock-based investments.

### **Why Debt Funds May Be Attractive**

Debt funds are popular among conservative investors for several reasons:

#### **1. Lower Volatility**

Debt funds are less affected by market ups and downs because their returns come mainly from fixed-interest payments.

#### **2. High Liquidity**

They allow quick redemption, making them suitable for short-term financial needs, emergency funds, or temporary money parking.

#### **3. Diversification**

They spread investments across different issuers, maturities, and sectors, reducing the risk of depending on a single borrower.

#### **4. Regular Income Potential**

Many debt securities provide interest at periodic intervals, offering predictable returns over time.

#### **5. Professional Fund Management**

Experts analyze interest-rate trends, credit ratings, and market risks, making decisions on which instruments to buy or sell.

## **Who Should Consider Debt Funds**

Debt funds are suitable for:

- Conservative investors
- People saving for short- or medium-term goals
- Individuals who need stability and liquidity instead of high but risky returns
- Borrowers with personal loans who want a safe place to park surplus money

## **Types of Debt Funds & Important Concepts**

### **Types of Debt Funds (Explained in Simple Words)**

#### **Overnight Funds**

These invest in securities that mature in one day. They carry extremely low risk and offer high liquidity.

#### **Liquid Funds**

These invest in short-term instruments maturing within 91 days. They are excellent for temporarily parking money.

#### **Money Market Funds**

These invest in money market instruments maturing within one year. Suitable for short-term financial goals.

### **Ultra-Short and Short Duration Funds**

These funds invest in securities with maturities from a few months to a few years. They aim for slightly higher returns than liquid funds while keeping risk moderate.

### **Medium and Long Duration Funds**

These invest in longer-term bonds, which can generate higher returns. However, they are more sensitive to interest-rate changes.

### **Corporate Bond Funds and Banking & PSU Funds**

These invest mainly in high-rated bonds issued by large companies, banks, and government-backed entities. They aim to reduce credit risk.

### **Gilt Funds**

These invest only in government securities. They have no credit risk but show higher volatility when interest rates fluctuate.

### **Dynamic Bond Funds**

These funds actively change their portfolio duration depending on interest-rate expectations.

### **Fixed Maturity Plans (FMPs)**

These are closed-end funds that mature on a specific date. They are similar to fixed deposits but their returns are not guaranteed.

**Table Name : Bajaj Finserv AMC Debt Fund Schemes**

Scheme Name	Minimum Investment Amount	Inception Date	Risk Type
Bajaj Finserv Gilt Fund	₹ 1,000 ( <a href="#">Bajaj AMC</a> )	15/01/2025 ( <a href="#">Bajaj AMC</a> )	Moderate ( <a href="#">Bajaj AMC</a> )
Bajaj Finserv Banking and PSU Fund	₹ 1,000 ( <a href="#">Bajaj AMC</a> )	13/11/2023 ( <a href="#">Bajaj AMC</a> )	Moderate ( <a href="#">Bajaj AMC</a> )
Bajaj Finserv Money Market Fund	₹ 1,000 ( <a href="#">Bajaj AMC</a> )	24/07/2023 ( <a href="#">Bajaj AMC</a> )	Low to Moderate ( <a href="#">Bajaj AMC</a> )
Bajaj Finserv Overnight Fund	₹ 1,000 ( <a href="#">Bajaj AMC</a> )	05/07/2023 ( <a href="#">Bajaj AMC</a> )	Low ( <a href="#">Bajaj AMC</a> )
Bajaj Finserv Liquid Fund	₹ 1,000 ( <a href="#">Bajaj AMC</a> )	05/07/2023 ( <a href="#">Bajaj AMC</a> )	Low to Moderate ( <a href="#">Bajaj AMC</a> )

### **Important Terms You Need to Know**

#### **Fixed-Income Securities**

These are debt instruments like bonds or treasury bills that pay a fixed interest amount.

#### **Net Asset Value (NAV)**

NAV is the per-unit value of a mutual fund. It changes daily based on the value of the fund's holdings.

#### **Credit Risk**

This is the risk that a company or government might fail to make interest or principal payments.

#### **Interest Rate Risk (Duration Risk)**

Bond prices fall when interest rates rise. Long-duration funds suffer greater price movement.

### **Liquidity Risk**

Sometimes the fund may find it difficult to sell certain securities quickly, especially during market stress.

### **Diversification**

A method of reducing risk by investing in many different instruments.

### **Professional Management**

Fund managers track changing market conditions and adjust the portfolio accordingly.

### **Table Name : Key Terminology**

Term	Meaning	Why It Matters
NAV (Net Asset Value)	Price of one unit of the mutual fund	Helps compare fund growth
Credit Risk	Risk that borrower may default	Higher credit risk = higher return but higher risk
Duration	Sensitivity to interest rates	Higher duration = more impact when rates change
Yield	Interest earned	Shows how much return fund may generate
AUM (Assets Under Management)	Total money managed by the fund	Higher AUM = better stability
Expense Ratio	Annual fee charged by the AMC	Lower expense = higher returns for investors

### **Risks, Tax Rules & Relevance for Someone with a Personal Loan**

#### **Risks in Debt Mutual Funds**

Debt funds are safer than equity funds but they are not risk-free.

##### **Interest Rate Risk**

If interest rates rise, the value of bonds falls. This reduces the NAV of the fund.

##### **Credit Risk**

If an issuer defaults or their credit rating falls, the value of that debt instrument drops, impacting returns.

##### **Liquidity Risk**

Some securities may not be easy to sell quickly, especially during volatile markets.

##### **No Guaranteed Returns**

Debt funds do not assure fixed returns, unlike fixed deposits.

##### **Taxation Rules**

Since April 2023, capital gains from debt mutual funds are taxed at the investor's income-tax slab rate, regardless of how long they held the investment.

### **How Debt Funds Help Someone with a Personal Loan**

Debt funds are particularly relevant for personal-loan borrowers because they offer:

#### **1. A safe place to park temporary surplus money**

If you occasionally have extra funds after paying EMIs, you can invest them in liquid or short-duration funds.

#### **2. Liquidity for emergencies or EMI management**

You can redeem your money easily whenever needed.

### **3. More stable returns compared to equity**

Debt funds make sense when your investment horizon is short and you cannot afford major losses.

#### **Precautions for Loan Borrowers**

If you already have a personal loan:

- Avoid long-duration debt funds because they fluctuate more.
- Do not rely on debt funds for guaranteed returns.
- Be aware that gains are taxable at your applicable income-tax rate.
- Choose funds with high credit-quality portfolios to reduce default risk.
- Keep your emergency money in liquid or ultra-short duration funds.

**Table Name : Which Debt Fund Should you choose?**

<b>Goal / Situation</b>	<b>Recommended Debt Fund Type</b>	<b>Why</b>
Emergency fund	Liquid Fund / Overnight Fund	Quick access, low risk
Parking money for a few days	Overnight Fund	Safest short-term option
Parking money for 1–3 months	Liquid or Ultra-Short Term Fund	Low volatility
Saving for 6–12 months	Money Market Fund	Better return stability
Saving for 1–3 years	Short Duration Fund	Balanced risk
Long-term risk-free investment	Gilt Fund	Govt-backed, no default risk
Want stability + decent returns	Banking & PSU / Corporate Bond	High credit-quality
Comfortable with interest-rate movement	Dynamic Bond Fund	Manager adjusts portfolio

#### **Conclusion**

Debt mutual funds provide a combination of stability, liquidity, diversification, and reasonable returns. They are well-suited for investors who want low-to-moderate risk exposure. For individuals with personal loans, debt funds are useful tools for short-term savings, EMI planning, and maintaining financial safety.

However, it is crucial to select the right type of debt fund based on your needs, risk tolerance, and the time horizon of your financial goals. Always consider interest-rate risk, credit risk, and taxation before investing.
